Cat Circulatory Diagram

The Circulatory System of the Cat. The circulatory system of the cat is comprised of the heart, a network of arteries and veins, and the spleen (which serves as a blood reservoir). A cat's heart rate, beating from 110 to 140 times a minute, is almost twice the normal heart rate of a human. The cat's body contains half a pint of blood, and this blood is circulated through the body once every 11 seconds.

Ultimate Cat: The Circulatory System of the Cat

Anatomy and Physiology of The Heart - Duration: 45:21. ... Blood Vessels of the cardiovascular system in models and cat dissections - Duration: 24:06. Ren Hartung 11,716 views.

Circulatory System: Arteries of the cat

Cardiovascular system in a cat. A series of valves keep blood flowing in one direction through the heart. The atrioventricular valves are valves between the atria and the ventricles. The semilunar valves are valves between the heart and the aorta and between the heart and the pulmonary artery.

Introduction to Heart and Blood Vessel Disorders in Cats ...

A domestic cat's normal heart rate ranges from 140 to 220 beats per minute (bpm), and is largely dependent on how excited the cat is. For a cat at rest, the average heart rate usually is between 150 and 180 bpm, more than twice that of a human, which averages 70 bpm.

Cat anatomy - Wikipedia

The cardiovascular system (cat) (dog) includes the heart and blood vessels. The cardiovascular system performs the function of pumping and carrying blood to the rest of the body. The blood contains nutrients and oxygen to provide energy to allow the cells of the body to perform work.

Cat Dissection- Circulatory System Flashcards | Quizlet

When dealing with the circulatory system, it is best to think of the vessels like a road map, one vessel leads to another with branches into these two vessels...etc. The cats have been injected with colored latex to make identifying the vessels easier. The arteries will have a pink color and the veins will have a blue color.

VCD - Vessels

A cat's cardiovascular system (or circulatory system) is the system responsible for circulating blood throughout the body. It consists of the heart and blood vessels, namely arteries, veins and capillaries. Where Is the Cardiovascular System Located?

Structure and Function of the Cardiovascular System in Cats

The sinoatrial node (SA-node) in the right atrium works like a small built-in timer. It fires off an electrical impulse in regular intervals (About 110-130 per minute when the cat rests and faster when the cat runs fast. This controls the heart rate.) Each impulse spreads across both atria which causes them to contract.

Cat-Heart

Inferior Vena Cava. Brachiocephalic Vein. External Jugular (Internal Jugular) Transverse Facial. Renal Vein. Common Iliac Vein. Femoral Vein. Cardiac (Coronary) Vein. Right and Left Subclavian Vein.

Cat Circulatory System Lab Guide
