Biosecurity in Aquaculture, Part 1: An Overview | The Fish ...

The frequency with which feed is distributed is primarily determined by fish size and the characteristics of the culture system. Young fish grow faster and have better feed efficiency when fed several times a day. Older fish do not exhibit the same benefits from frequent feeding. Feeding can be done by hand or with automatic feeders.

Principles of Fish Nutrition | The Fish Site

In this case the fish stocked should be 13-15 cm fingerlings produced in fish farms ('aquaculture-based fisheries') in order to avoid the losses that would occur with smaller fish. Common carp are usually stocked with other cyprinid species, in accordance with the productivity of the water and the intensity of exploitation.

Guiding Principles « Global Aquaculture Alliance

One of the biggest impacts of aquaculture is its environmental impacts. Some aquaculture practices that do not maintain standards and follow sustainable aquaculture practices, negatively impact the environment and also put pressure on wild fish growth by habitat modification and using wild caught fish as fish feed.
