Abstract. The essential
steps of PE pipe and
fitting production are
to heat, melt, mix and
convey the raw
material into a
particular shape and
hold that shape during
the cooling process.

INTERACTIONS Pipe stiffness at the instant of load application, a time-independent stiffness, is preferred for the following reasons:

- The load at the time of placement dominates the final displacements.
- At the instant of application of load, small deflection theory has not been violated.
