Night Sky A Field Guide For

Shooting After Dark

For time-lapse photography of the stars in the night sky, use an aperture of about $f/5.6$ if the moon is full, $f/2.8$ if the moon is not full. In manual exposure mode, shoot a test shot at 10 seconds. “I would always recommend using the manual exposure mode to avoid the exposure changing from one frame to the next which can cause an annoying ...

Online Library Photography Night Sky A Field Guide For Shooting After Dark

At night, focused on the stars, its depth of field is razor-thin at $f/1.4$. This is one situation where stopping down to $f/2$ or $f/2.8$ may be preferable, solely from the perspective of depth of field. Although you will need to raise your ISO accordingly (or brighten the photo in post-processing), this tradeoff will be a necessary evil.
